

1. Who will be the user of the app?  
Ans: Doctors, nurses and other staff of the hospital along with the patient.
2. What problem does the app solve?  
Ans: It solves the record keeping of patients history and the process of making an appointment to a specific doctor or nurse.
3. What are the main feature of the app?  
Ans: Record sharing and the ability to check the doctors assigned.
4. What is the name of the app?  
Ans: Not yet decided
5. What is the product category of the app?  
Ans: It will fall under the Medical app category as the main functionality of the app includes health tracking and basic health records storage
6. How is the app different to existing competing app?  
Ans: In compared to other apps available in the present, this app will specifically be developed for a specific hospital. In the app, the hospital staff can view the patients profile without having to look through an entire file. Similarly, the patient does not need to carry a handful of papers to book doctor appointment, get medicines or any other hospital related works.
